

Just imagine a day when your technology works for you, not the other way around. Instead of laboring overtime just to keep everything up and running, you can focus on your operation's vision. If you are like most companies, your e-mail, business applications and website are more than a technical detail requiring expensive resources to manage; they can define the very success of your operation, and help you keep your competitive advantage.

Let BlueModus be your partner to manage those day-to-day information technology (IT) tasks. When you host with blueVANTAGE™, critical tasks such as updating, troubleshooting, patching, monitoring, administering, backing up and restoring, upgrading, and everyday support are all services we provide.

Our blueVANTAGE solution offers complete coverage for a broad range of requirements and has been refined and enhanced since its inception in 2001. Its foundation is based on our vast experience in application and web design, systems administration, and technology support. Our managed hosting solutions are available on either shared or dedicated server environments, providing 99.9 percent uptime.

Most importantly, customer service is never compromised. BlueModus maintains a highly qualified and readily available staff that is dedicated to our client's business needs. We take great pride in cultivating relationships with our clients rather than relying on an automated solution. When hosting with us you can expect professional, responsive support, for all of your hosted system needs.

Managed Hosting Packages
